Professional Summary

Software Engineering student with hands-on experience in AI backend engineering, chatbot development, prompt engineering, and modern frontend workflows. Comfortable building practical AI-powered systems using Flask, Express.js, TypeScript, Docker, and PostgreSQL.

Technical Skills

RAG Engineering
Prompt Engineering
AI Backend Development
Frontend Development
Flask
Express.js
TypeScript
Docker
PostgreSQL
LLM Fine-tuning

Experience / Projects

Developed a Flask backend serving RESTful endpoints for real-time AI inference with containerized deployment using Docker.
Built a full application stack with TypeScript frontend, Express.js REST API, Python Flask ML microservice, and PostgreSQL.
Created a real-time news sentiment analysis project using VADER on Yahoo Finance data with model evaluation metrics.
Engineered TF-IDF text features from video titles and tags.
Applied temporal feature engineering on publish metadata.

Education

Bachelor of Software Engineering

Certificates

IBM Generative AI Engineering Professional Certificate
Meta Front-End Developer Professional Certificate
Prompt Engineering and LLM Fine-tuning
